

Modern Trends in Geomechanics 4

an International Workshop in Assisi – May 16 to 18, 2016

Following the series of successful International Workshops held in Vienna in 2005, Stanford in 2010 and Nottingham in 2012, we are pleased to host the fourth Workshop on Modern Trends in Geomechanics (IW-MTG4). The format of IW-MTG4 will follow the established workshop tradition in which presentations are given by invited leading experts in various fields of geomechanics, including constitutive modeling, experimental geomechanics, analytical and numerical methods, micromechanics, coupled multiphysics processes and engineering applications. A total of 35 speakers have been invited to present at the three-day workshop. Although oral presentations will be given only by the 35 invited speakers, research students and young (or less young !) researchers are also encouraged to attend the workshop so that they can present their work within a poster session.

Further details can be found, including a preliminary program and how to register, on the workshop website: <http://mtig.uniroma2.it/>

We are looking forward to welcoming you to Assisi in May 2016!
